# VSee Mass Deployment

- 2024-01-17 - Advanced Troubleshooting

## VSee Messenger Installation Package for Mass Deployment

If you need a VSee installation package that you can use to roll out VSee Messenger with your software distribution system, you just need to put the **vsee.exe** (on Win) or **VSee.app** (Mac) on your internal distribution system. VSee does not require any external dependencies, thus just running the executable file would 'install' it.

For silent install on Windows, please run vsee.exe with "-no_autorun" parameter which will prevent VSee from running after installation. eg: vsee.exe -no_autorun -quiet_install
