Apps With Known Compatibility Issue with VSee on Mac

- 2023-08-11 - Common Errors and Other Issues

- Hear from Prosoft: An application to improve the audio output on Macs or PCs. It causes VSee to crash on opening any audio channel. The vendor claims that version 1.1.6 fixes this issue.

- Audio Hijack Pro from Rogue Ameoba: This application allows users to record audio from any application. It causes VSee to crash on opening any audio channel. There is no known resolution other than disabling Audio Hijack.

- MacKeeper from ZeoBit: This somewhat controversial software is a bundle of system utilities. It has been reported to cause VSee to crash. There is no known resolution other than removing it.

- Chromacam app: On macOS, it doesn't work well for long calls. The video might stop working after 30 minutes or more. But this is the Chromacam app's problem, and not by VSee.
