

How to Log in Using MFA

Jay-Ileen (Ai) - 2023-08-12 - Getting Started

Multi-Factor Authentication or MFA give VSee Clinic Organizations an extra layer of security as the Providers need to pass an additional verification step to access their VSee accounts.

This feature is enabled upon request for Clinic organizations only (not solo-Providers), please contact [Sales](#) or your Account Manager to enable this feature in your Clinic.

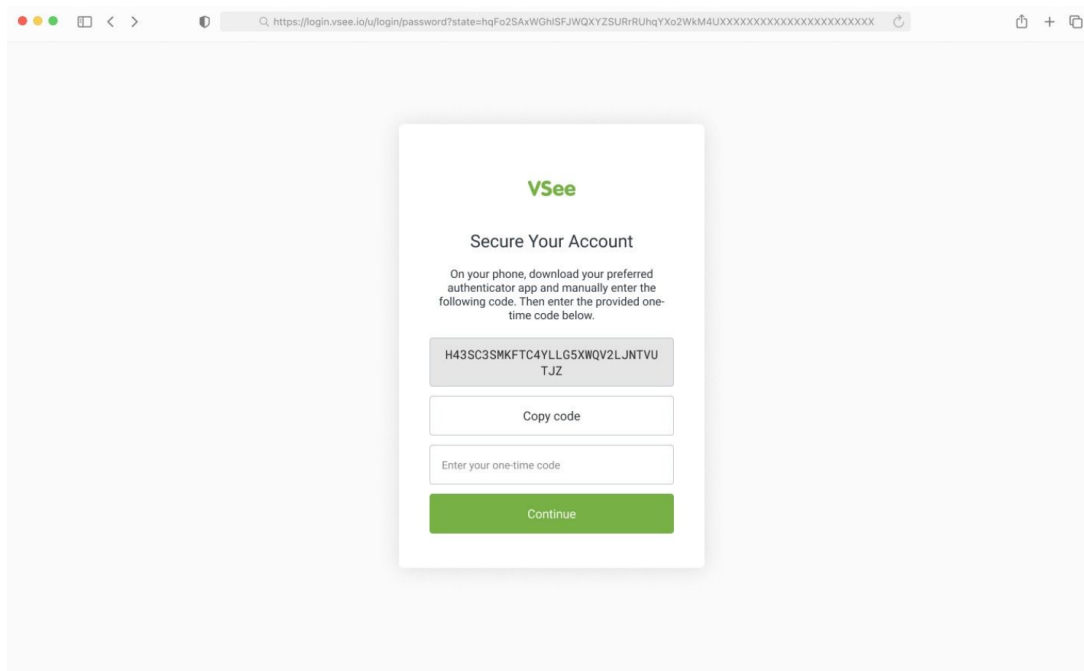

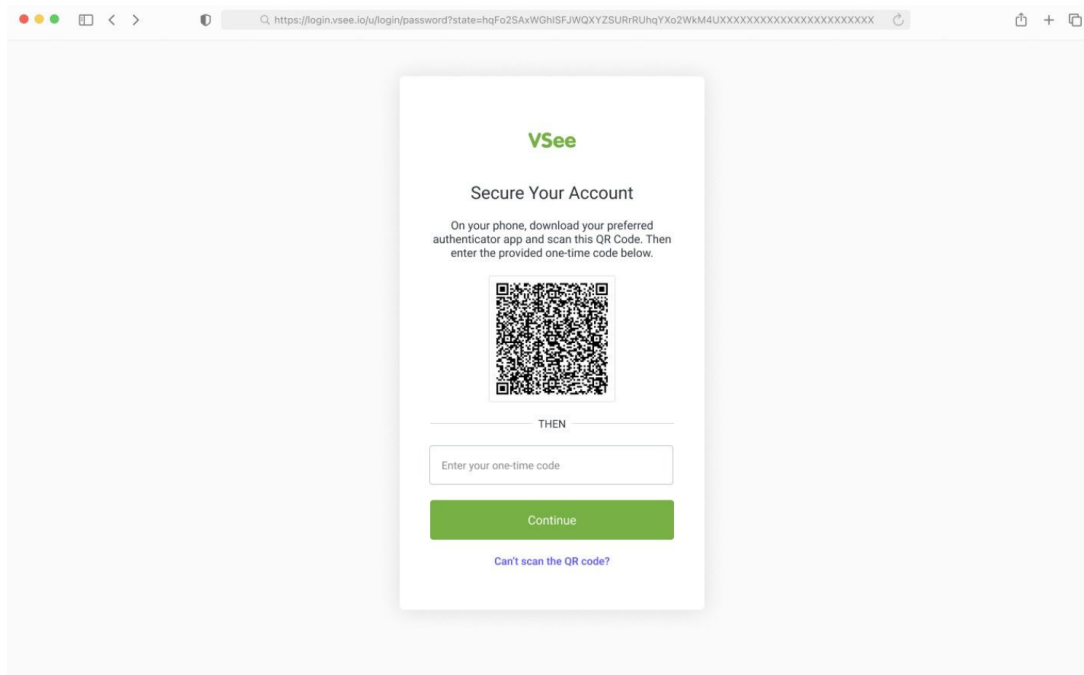

Setting up MFA for the First Time

If your account belongs to an organization that requires MFA, you will have to set up your account.

Note: This is a one-time setup process.

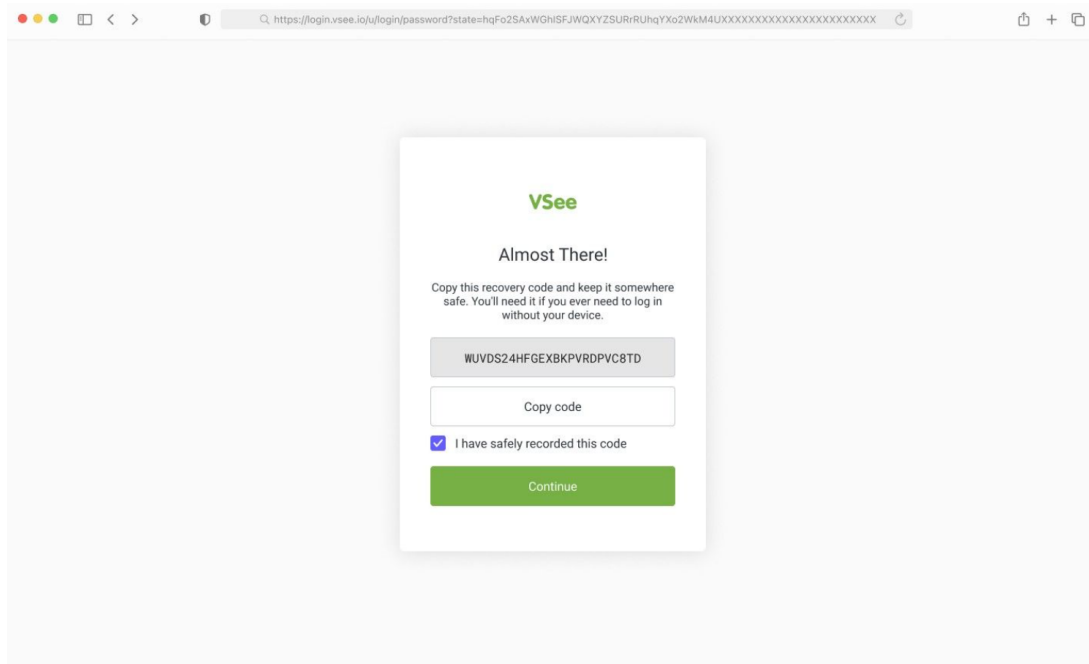

After logging in to your existing email address, you will need to download and use the Google Authenticator app or any similar authenticator app.

The screenshot displays the VSee Clinic login interface for Providers. At the top, the browser address bar shows 'https://clinic.vsee.me'. The VSee Clinic logo is in the top left, and 'Help' and 'Test Device' links are in the top right. The main content area features a 'PROVIDERS' section with a 'Log In' heading. Below this is a form with an 'Email address' input field and a green 'Continue' button. The footer indicates 'Powered by VSee'.

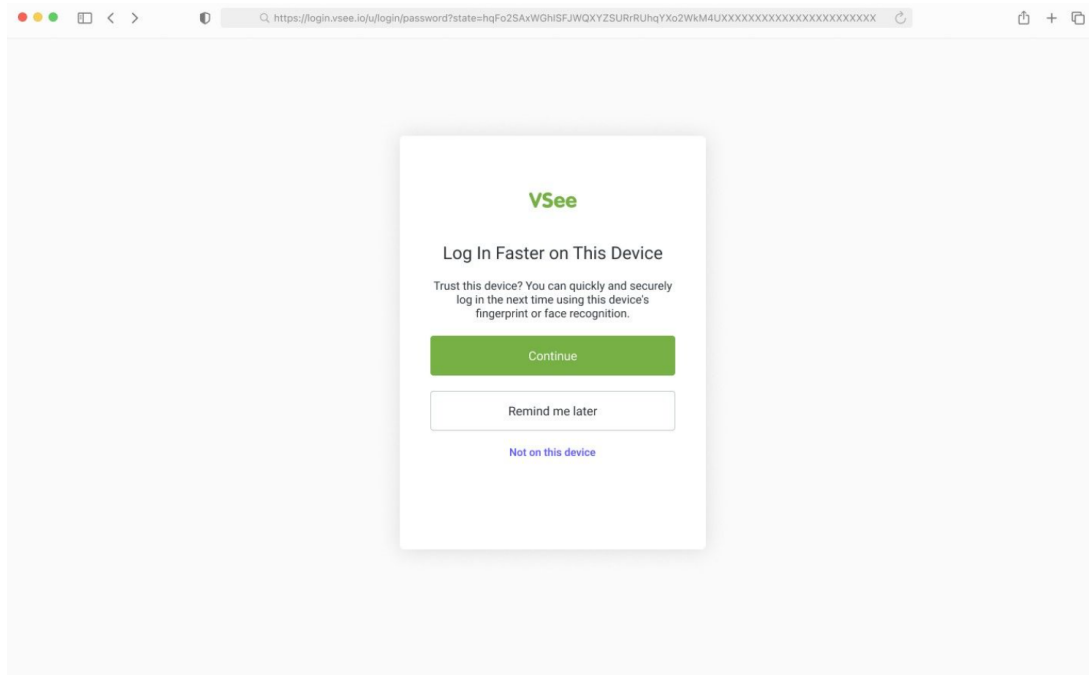

After successfully scanning the QR code or adding the manual code in the authenticator app, you will be asked to copy and safely store a recovery code.

You will need this code if you lose access to the device where the authenticator app is installed.

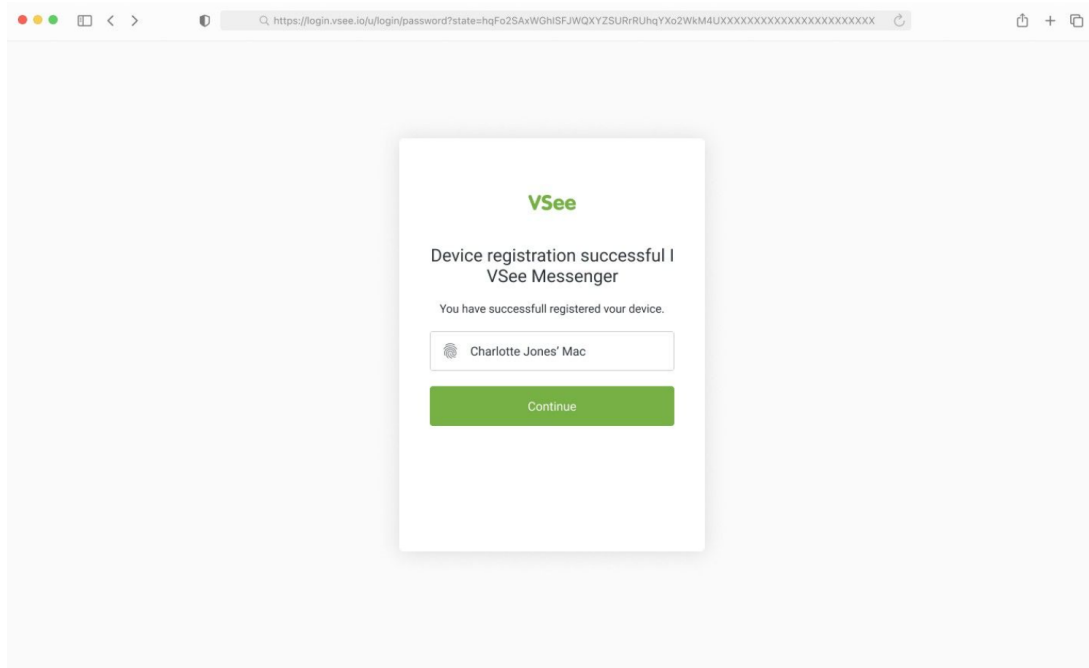

You will also be asked if you want to trust the device you're using to log in. If you click **Continue**, you will be asked to create a passkey which will be stored in the current device and web browser that you're using.

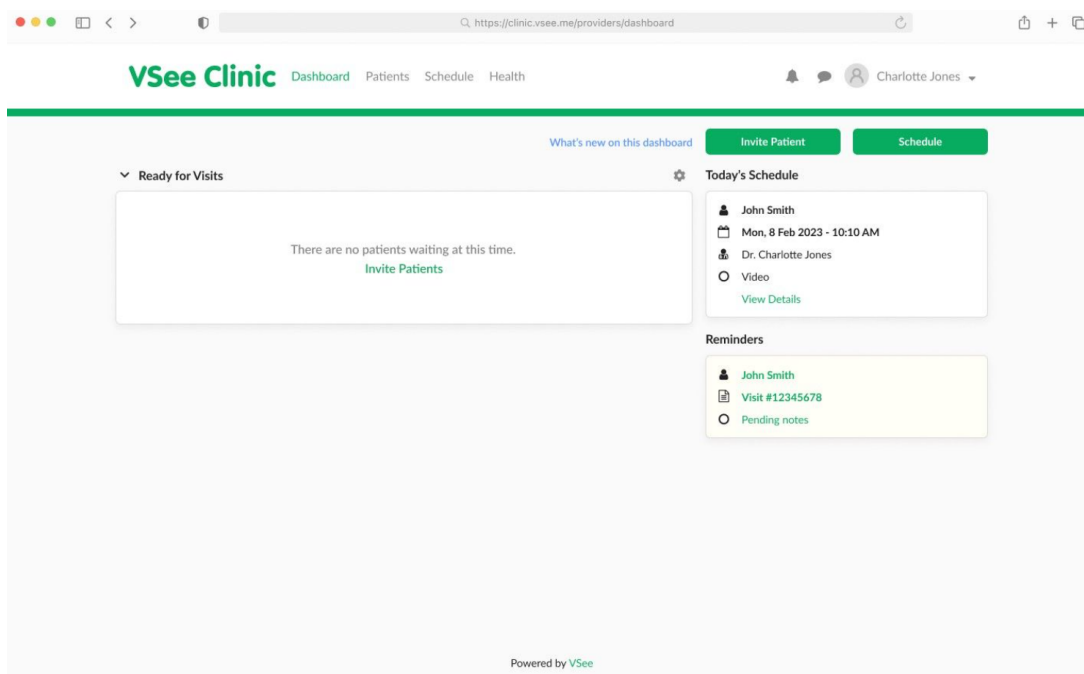

Storing this passkey will allow you to use your device's built IT biometric features such as touch ID (fingerprint) or face ID (facial recognition), instead of needing to type in the one-time code from your authenticator app each time you log in.

You will be automatically logged in after the MFA set-up steps are completed.

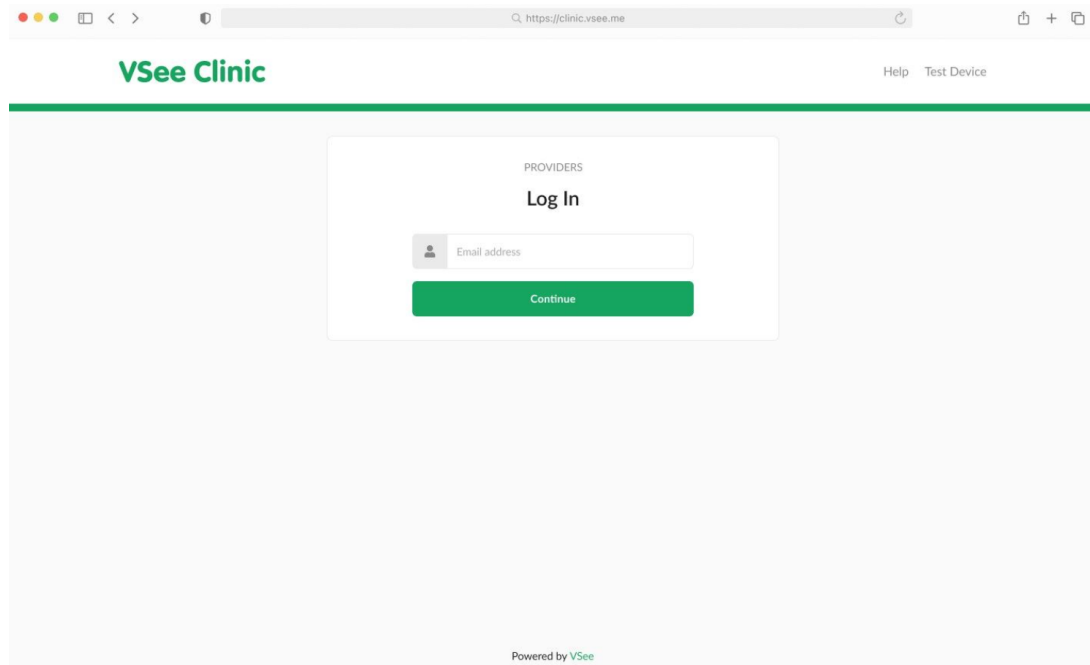

Logging in after MFA Setup

After you have successfully set up MFA for your account, the next time you log in, you will have quicker and more secure options to log in to your Clinic.

Log in with your existing email address.

You will see your VSee Clinic log-in page.

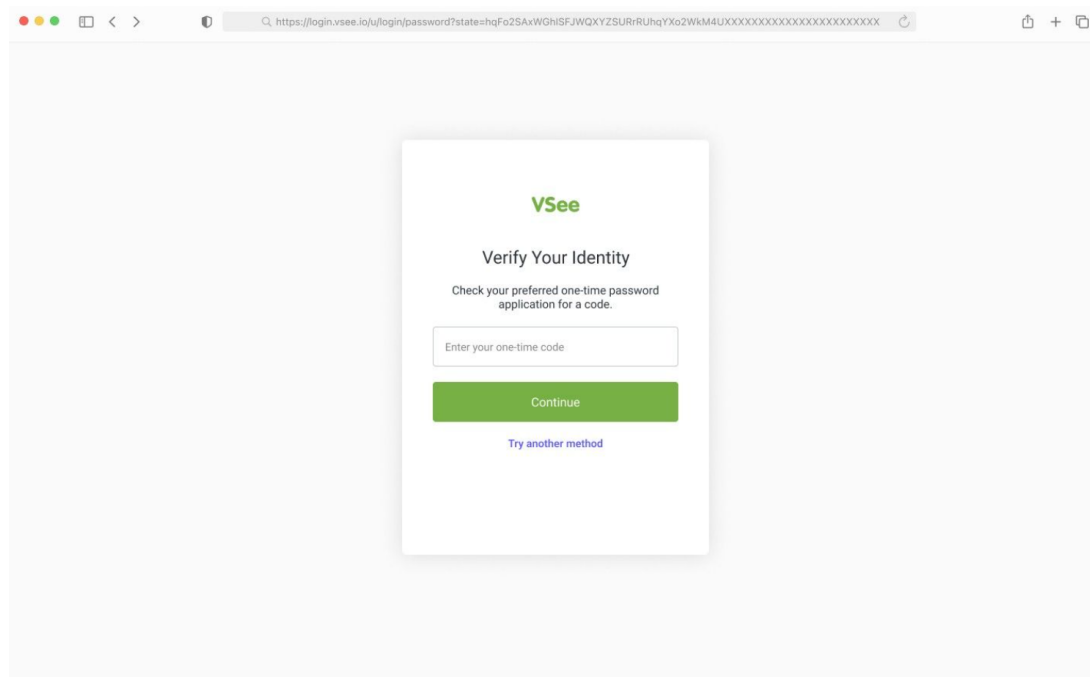

You may enter your Username (email) and then click the **Continue** button to go through the login flow.

The screenshot shows a web browser window with the address bar displaying `https://clinic.vsee.me`. The page features the VSee Clinic logo in the top left and links for 'Help' and 'Test Device' in the top right. The main content area is a light gray box with a white border, containing the text 'PROVIDERS' and 'Log In'. Below this is a text input field labeled 'Email address' with a user icon on the left. A green 'Continue' button is positioned below the input field. At the bottom of the page, it says 'Powered by VSee'.

You will be asked to verify your identity using your default authentication option before logging in.

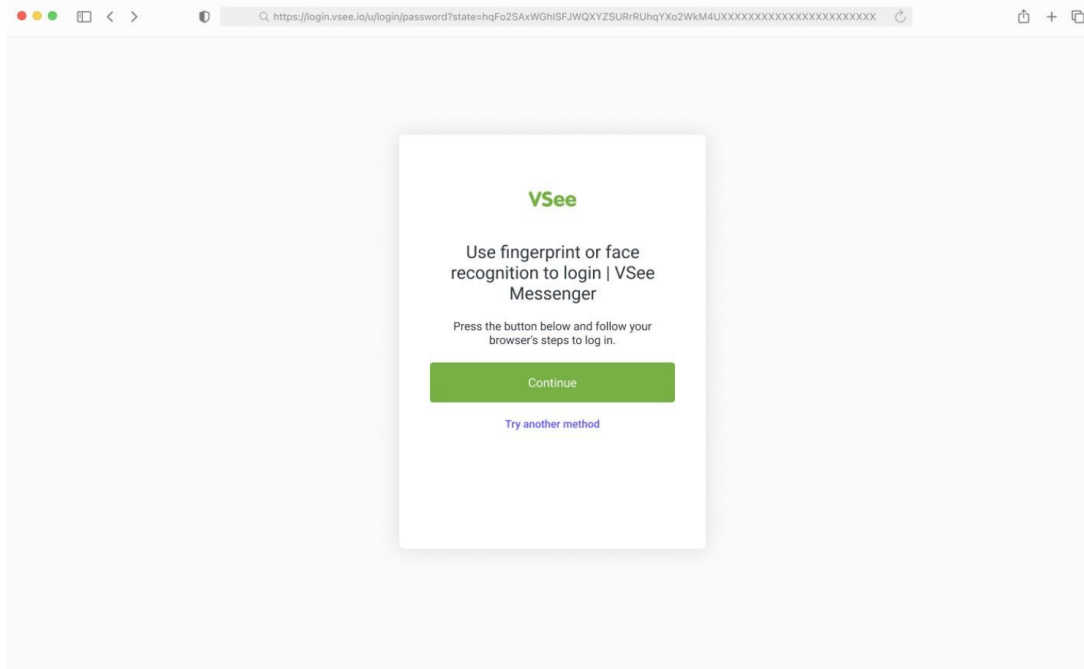

Get the one-time code by opening your preferred authenticator app.

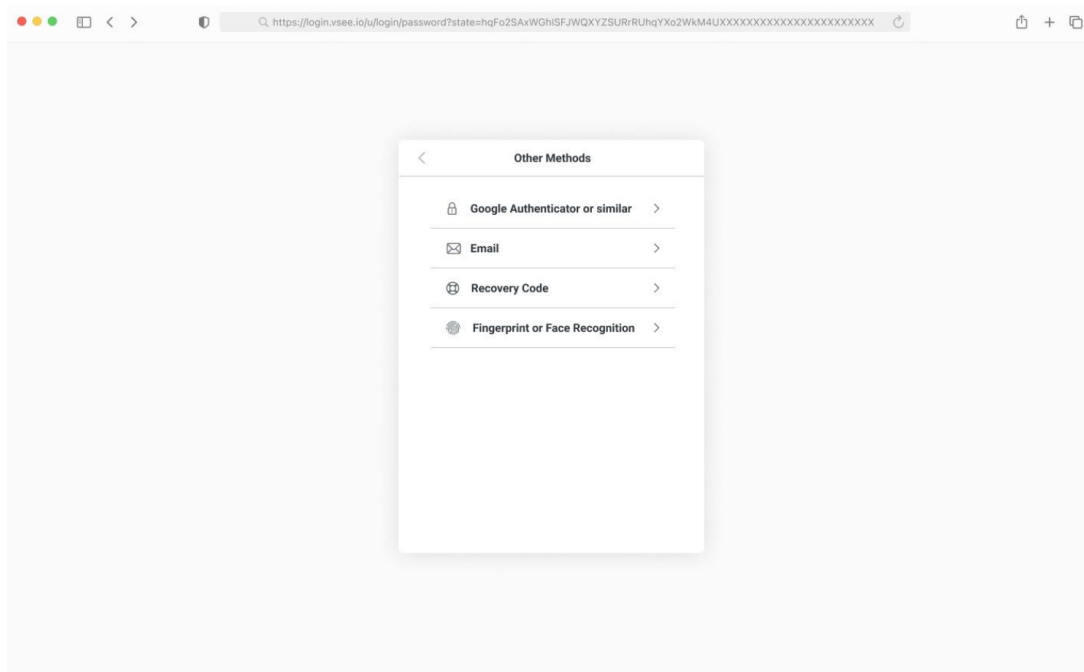

The screenshot shows a web browser window with a complex URL in the address bar. The page displays the VSee logo and the heading 'Verify Your Identity'. Below the heading, it says 'Check your preferred one-time password application for a code.' There is a text input field labeled 'Enter your one-time code'. A green 'Continue' button is located below the input field. At the bottom, there is a link that says 'Try another method'.

In case you've added this device as a trusted device, the default

authentication option would be your device's biometrics feature such as touch ID (fingerprint) or face ID (facial recognition).

In case you wanted to try verifying using another method, you may click **Try another method** to see a list of other available factors they may use to continue the verification.

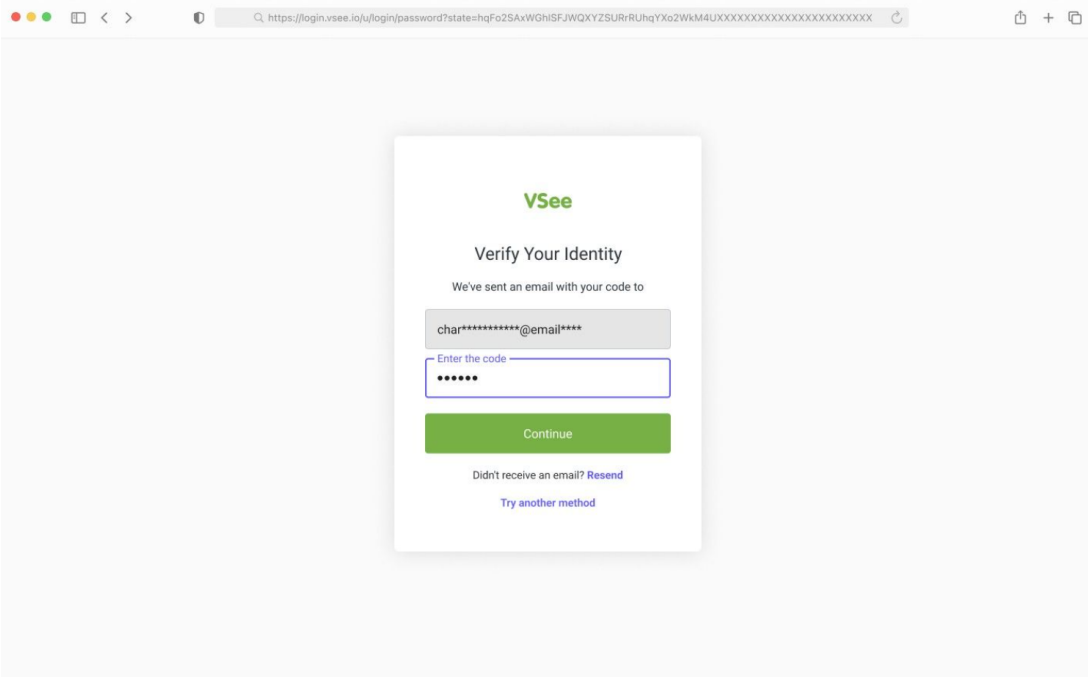

If you click **Email** as a method that you would like to use to verify, here is the page that you will see.

You will receive the one-time code in your account's registered email.

You will then need to copy and paste or type in the one-time code (Usually

a 6-digit code) in the field below. And you may also try to click the Resend button if you didn't receive the code.

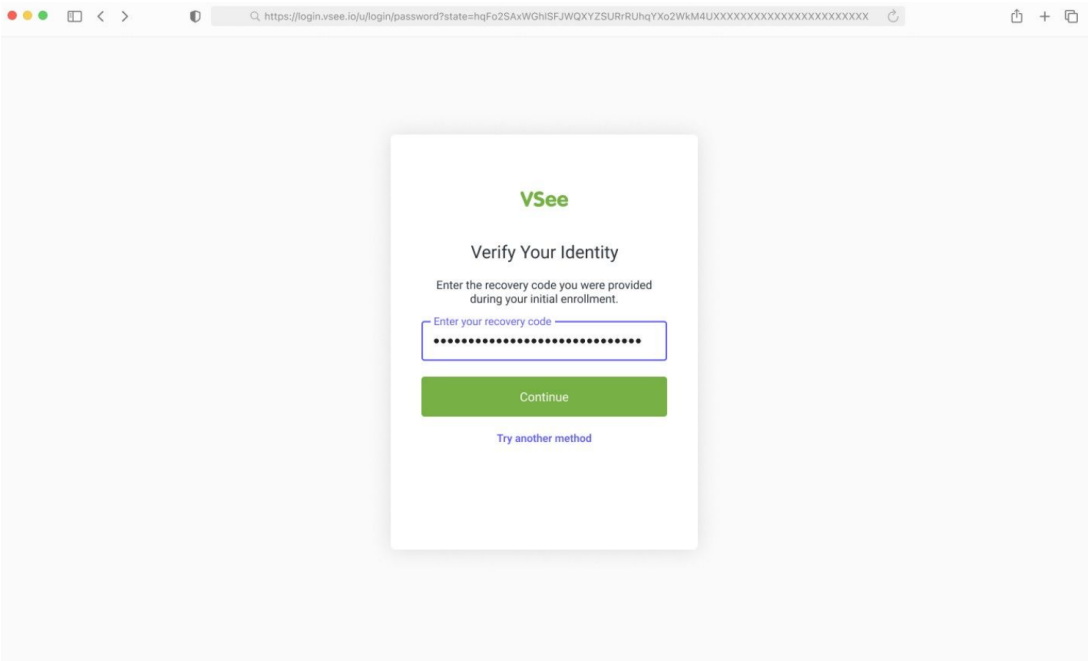

The screenshot shows a web browser window with the URL `https://login.vsee.io/#!/login/password?state=hqFo2SAxWGhISFJWQXYZSURrUhgYXo2WkM4UXXXXXXXXXXXXXXXXXXXX`. The page displays the VSee logo and the heading "Verify Your Identity". Below the heading, it states "We've sent an email with your code to" followed by a masked email address "char*****@email****". There is a text input field labeled "Enter the code" containing six dots. A green "Continue" button is positioned below the input field. At the bottom, there are two links: "Didn't receive an email? Resend" and "Try another method".

If you click **Recovery code** as a method that you would like to verify, here is the page that you will see.

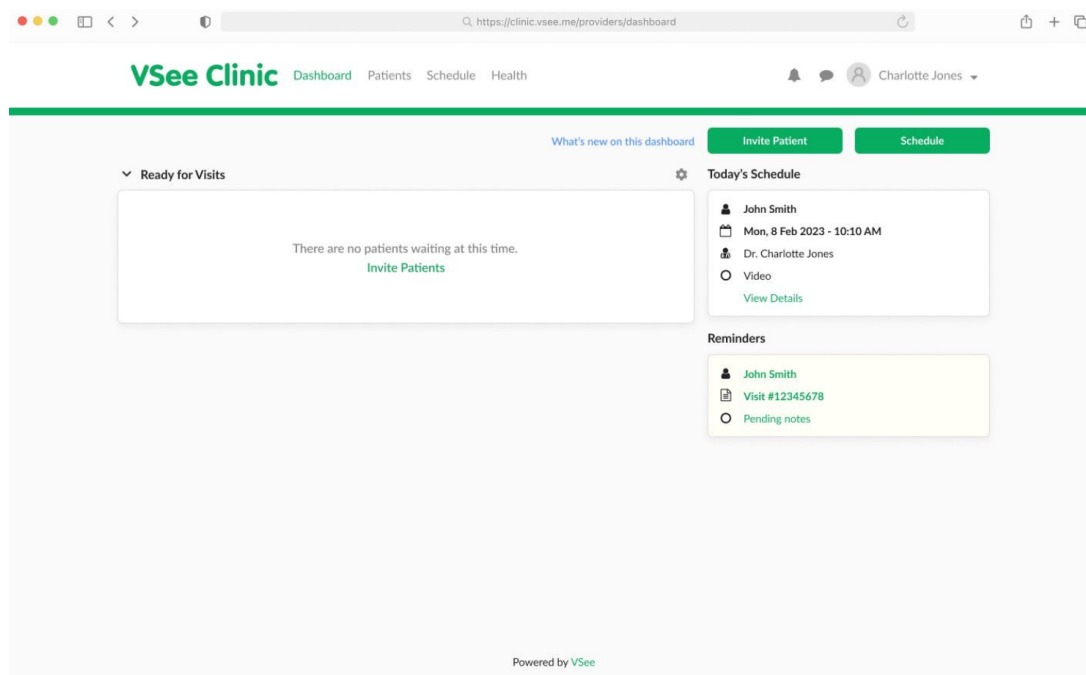

You will need to input the recovery code which was given to them during the 1st time you set up MFA, and click **Continue**.

In case you've run out of methods or have completely lost access to any of their registered factors, you will need to request VC admin via VC customer support to reset your account's MFA.

The screenshot shows the same VSee "Verify Your Identity" page, but with different instructions: "Enter the recovery code you were provided during your initial enrollment." The text input field is labeled "Enter your recovery code" and contains sixteen dots. The green "Continue" button and the "Try another method" link are still present at the bottom.

You will be automatically logged in after the MFA set-up steps are completed.

Note: Users will see the normal login page if their account belongs to an organization that does not require MFA. They may log in normally, the same as before.

Need more assistance? Send us an email at help@vsee.com or check out the [Help](#) section under the Profile Menu of your VSee Clinic.
