How to Use the New Analytics Dashboard UI

Francis - 2026-11-18 - VSee Clinic for Providers

The Analytics Dashboard gives administrators visibility into patient demographics and clinic performance through charts, visualizations, and key metrics — all in one place.

Accessing the Dashboard

[Placeholder — need actual navigation path, e.g., "Go to Admin > Analytics" or similar]

What You'll See

The dashboard displays the following metrics **and automatically adapts** based on what data your clinic collects:

- **Patient Demographics** — View breakdowns by age, gender, and reason for visit.
- **Rich Visualizations** — Use bar charts and trend graphs to interpret clinic activity at a glance.
- **Performance Metrics** — Track key indicators like total visit volume, appointment completions, walk-in visits, average duration, wait times, and payment collections.

Smart Data Detection & Adaptability

Not all clinics collect the same intake data. The dashboard now features an **intelligent data detection system** that checks exactly which metrics your clinic actually tracks.

If your clinic's registration forms don't capture a specific data point (e.g., reason for visit), the system will **automatically hide** that specific chart or metric instead of displaying an empty placeholder or causing an error. This ensures your view remains clean and focused only on what's relevant to your practice.

Using the Dashboard

[Placeholder — steps for filtering, date ranges, exporting data, drilling into a specific chart, etc., if applicable]
