VSee Messenger 4.22 - Source Name Signaling Improvement

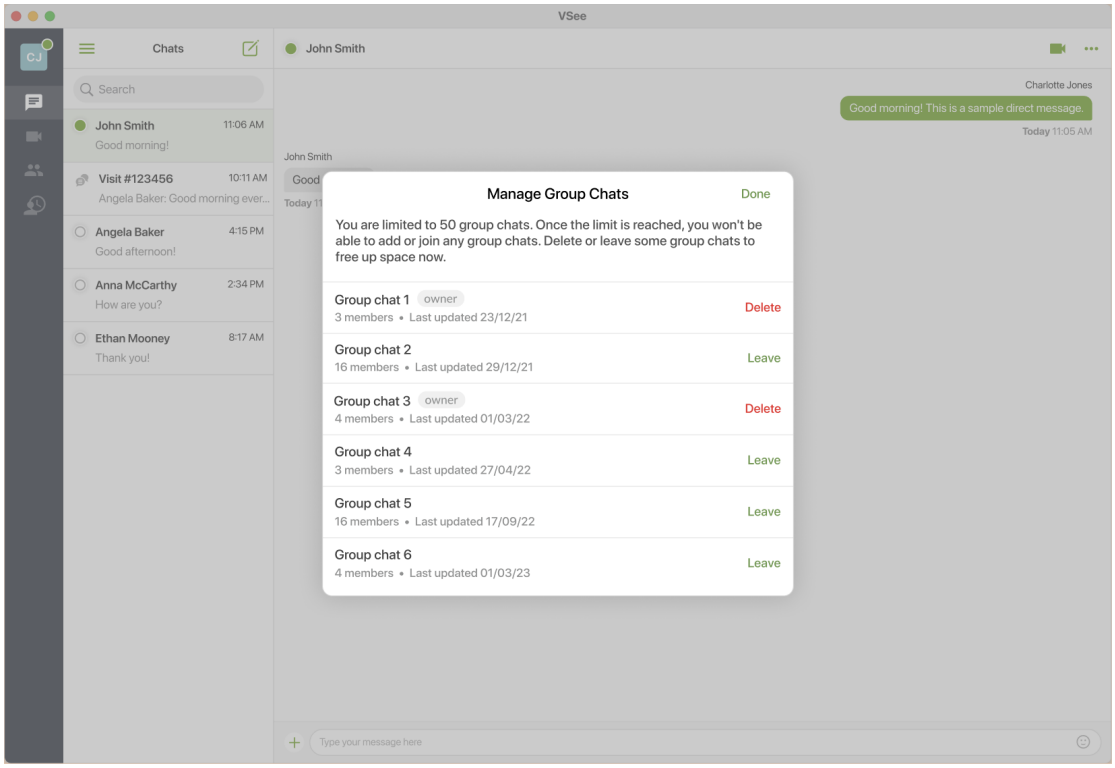

2024-07-15 - Jay-Ileen (Ai) - VSee Messenger

On July 12, VSee Messenger 4.22 will be released to provide better group chat management and more efficient bandwidth usage for mobile users.

Improved Group Chat Management

Is your VSee chat list littered with abandoned group chats you're not sure whether to keep? With our latest update, managing group chats has just gotten easier. Now, you have more options to decide which group chats to keep, archive, hide, delete, or leave.

For detailed steps on how to manage group chats, check out our new KB article here.

Optimized Bandwidth Usage on Mobile

We have implemented a new algorithm to optimize bandwidth usage for calls on iOS and Android devices. These improvements are especially beneficial for users with lower internet speeds, ensuring they receive better quality screen-sharing and group call experiences.

- **Smart Bandwidth Management:** Our system intelligently allocates bandwidth, adapting in real-time to varying network conditions. This ensures that your screen-sharing sessions remain clear and uninterrupted, regardless of location or network speed.

- **Enhanced Video Quality:** Experience sharper, clearer visuals during screen-sharing sessions. Our optimized bandwidth management not only improves video quality but also enhances the overall clarity and engagement of your calls.

Make sure to upgrade to the latest version on the day of the release.
