VSee Messenger 4.13.0 – Leveling Up Your Group Chats & Annotations

2022-03-07 - Patty - VSee Messenger

VSee Messenger version 4.13.0 will be available for download starting on March 7th.

- New! Now you can join up to 48 Group Chats
- New! See all annotations in an existing call
- New! Dark Mode for macOS

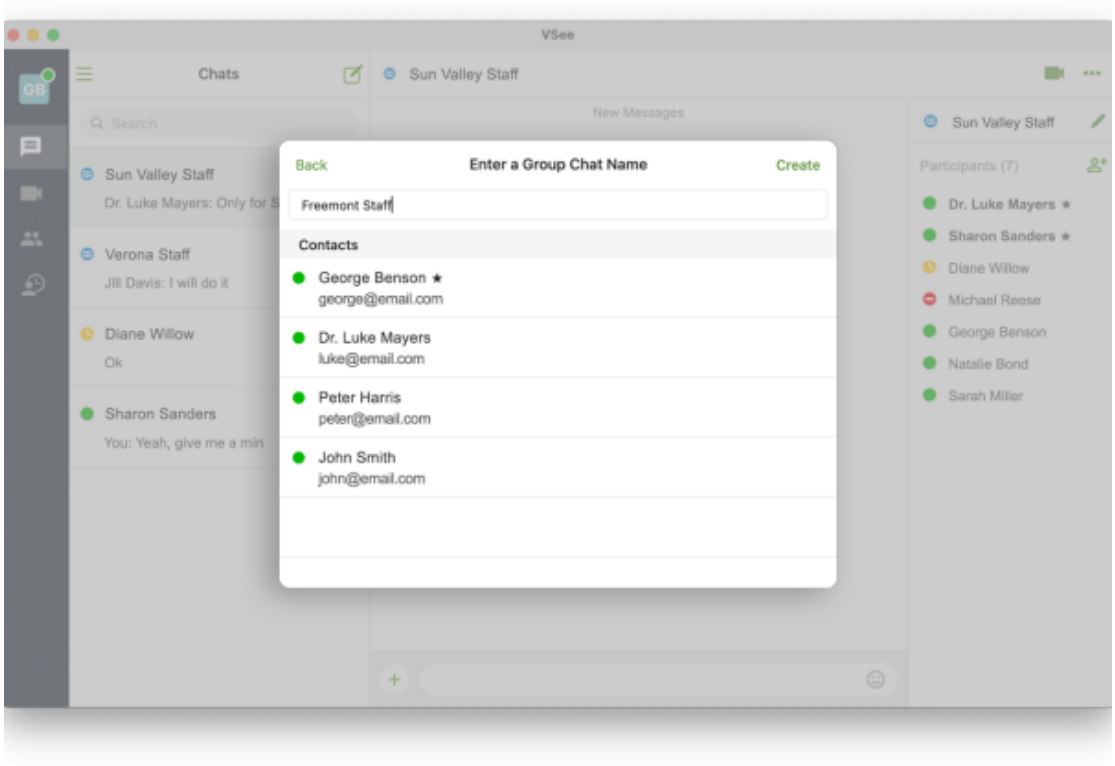

See what's new below:

1. New Group Chat features

- The new maximum number of group chat rooms a user can join has now increased from 18 to 48.

***Note:** Older versions of VSee Messenger are still restricted to the 18 group chat room limit. If you use the new version to add over 18 group chats, and then log into an older version of VSee Messenger, you will lose all the group chats you added over the 18 room limit.*

- Previously, all unnamed chat rooms were considered temporary. Now, all rooms will be created as persistent rooms and the group chat creator will be required to enter a name for the group before it will be created.

2. See All Annotations

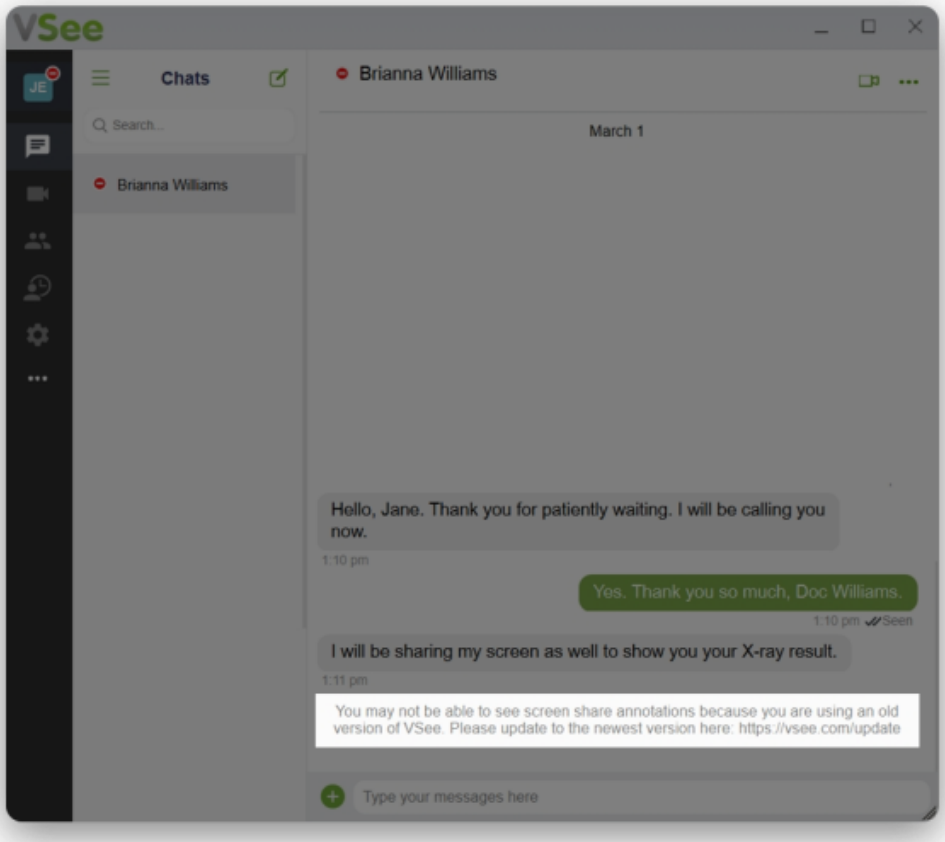

- Users that join an existing call will now also be able to see any annotations that were drawn prior to them joining the call.

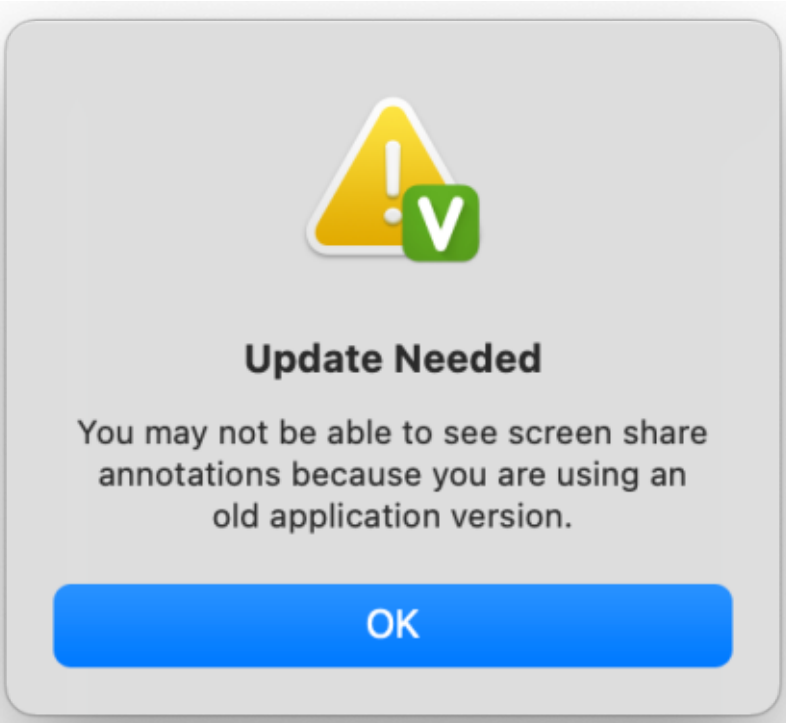

3. New Update Warnings

- Not sure if you're on an old or updated version of Messenger? You will now receive warnings to update if you are running older versions of VSee.

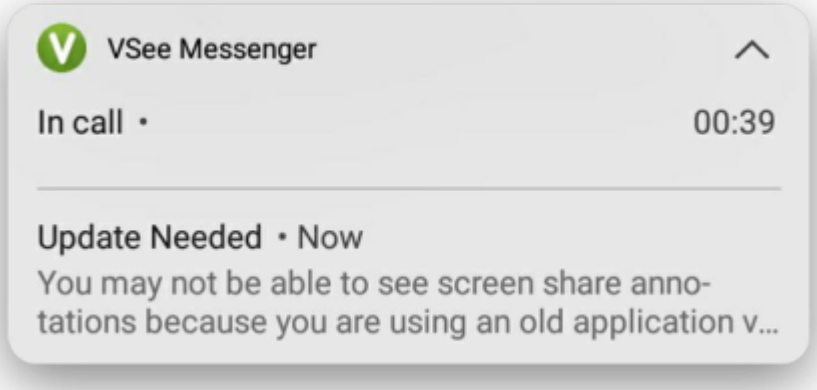

Windows: The message will be sent as a system chat message.

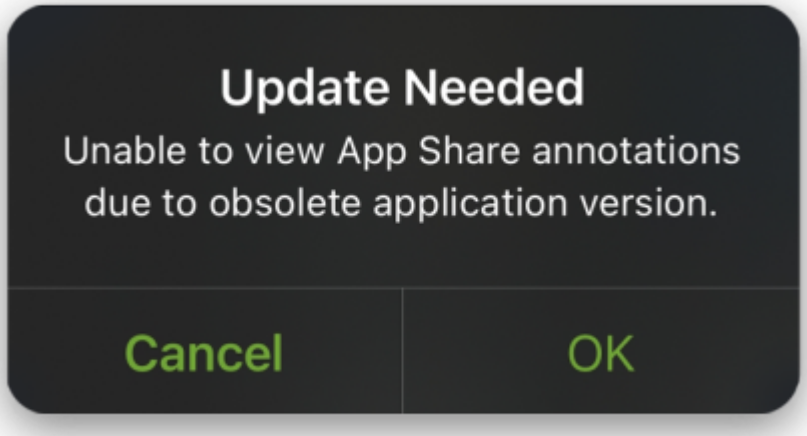

Windows

Update Needed
You may not be able to see screen share annotations because you are using an old application version.
OK
